

Naturally sustainable

Carbon footprint
indicator summary

enea

Enea is constantly looking for sustainable and responsible solutions through a design and production philosophy that takes environmental criteria into account:

Simplicity

During the design process, efforts are made to minimise the number of components, whilst achieving a perfect interrelation between them.

Minimum environmental impact

Improving product design to limit their impact throughout their full life cycle.

Recyclability and reuse

Enea seeks to use recyclable materials for the manufacture of its designs; as well as to use simple product disassembly techniques to facilitate the recycling of the materials.

Health and safety

Promoting optimum work conditions and taking care of the health of its team members.

Summary 2023 GHG Emissions

| | | metric tons CO2e | % of total footprint |
|--------------------------|--|------------------|----------------------|
| Scope 1 Emissions | Scope 1 emissions are direct greenhouse (GHG) emissions that originate from sources that are controlled or owned by Enea (e.g., emissions associated with fuel combustion in boilers, furnaces, and vehicles). | 591.49 | 63% |
| Scope 2 Emissions | Scope 2 emissions include those from electricity and other sources of energy purchased from our local utility suppliers that are not combusted on-site. Examples include electricity, steam, and chilled or hot water. To generate this energy, utilities combust coal, natural gas, and other fossil fuels, emitting carbon dioxide, methane, and nitrous oxide in the process. | 345.8 | 37% |

Summary 2022 GHG Emissions

| | | metric tons CO2e | % of total footprint |
|--------------------------|--|------------------|----------------------|
| Scope 1 Emissions | Scope 1 emissions are direct greenhouse (GHG) emissions that originate from sources that are controlled or owned by Enea (e.g., emissions associated with fuel combustion in boilers, furnaces, and vehicles). | 748.36 | 62% |
| Scope 2 Emissions | Scope 2 emissions include those from electricity and other sources of energy purchased from our local utility suppliers that are not combusted on-site. Examples include electricity, steam, and chilled or hot water. To generate this energy, utilities combust coal, natural gas, and other fossil fuels, emitting carbon dioxide, methane, and nitrous oxide in the process. | 464.24 | 38% |

Summary 2021 GHG Emissions

| | | metric tons CO2e | % of total footprint |
|--------------------------|--|------------------|----------------------|
| Scope 1 Emissions | Scope 1 emissions are direct greenhouse (GHG) emissions that originate from sources that are controlled or owned by Enea (e.g., emissions associated with fuel combustion in boilers, furnaces, and vehicles). | 909.34 | 73% |
| Scope 2 Emissions | Scope 2 emissions include those from electricity and other sources of energy purchased from our local utility suppliers that are not combusted on-site. Examples include electricity, steam, and chilled or hot water. To generate this energy, utilities combust coal, natural gas, and other fossil fuels, emitting carbon dioxide, methane, and nitrous oxide in the process. | 343.58 | 27% |

Summary 2020 GHG Emissions

| | | metric tons CO2e | % of total footprint |
|--------------------------|--|------------------|----------------------|
| Scope 1 Emissions | Scope 1 emissions are direct greenhouse (GHG) emissions that originate from sources that are controlled or owned by Enea (e.g., emissions associated with fuel combustion in boilers, furnaces, and vehicles). | 666.95 | 76% |
| Scope 2 Emissions | Scope 2 emissions include those from electricity and other sources of energy purchased from our local utility suppliers that are not combusted on-site. Examples include electricity, steam, and chilled or hot water. To generate this energy, utilities combust coal, natural gas, and other fossil fuels, emitting carbon dioxide, methane, and nitrous oxide in the process. | 215.76 | 24% |

Summary 2019 GHG Emissions

| | | metric tons CO2e | % of total footprint |
|--------------------------|--|------------------|----------------------|
| Scope 1 Emissions | Scope 1 emissions are direct greenhouse (GHG) emissions that originate from sources that are controlled or owned by Enea (e.g., emissions associated with fuel combustion in boilers, furnaces, and vehicles). | 783.2 | 69% |
| Scope 2 Emissions | Scope 2 emissions include those from electricity and other sources of energy purchased from our local utility suppliers that are not combusted on-site. Examples include electricity, steam, and chilled or hot water. To generate this energy, utilities combust coal, natural gas, and other fossil fuels, emitting carbon dioxide, methane, and nitrous oxide in the process. | 355.36 | 31% |

Our beautiful, strong, and sustainable pieces travel to all corners of the globe from our factory in the Basque Country, to keep you company while you are eating, chatting, or working. While you are relaxing, sharing, or waiting. **Taking care of the environment and reducing our ecological footprint is truly important to us.**
